**FINAL STATISTICAL REPORT**  
2004-05

The attached tables reflect the results of marketing the 2004-05 prune crop under the provisions of Marketing Agreement No. 110, as Amended, and Order No. 993, as Amended, regulating the handling of dried prunes produced in California. They are listed as follows:

We have calculated that the seasonal average parity price for dried prunes for the 2004-05 crop year was \$2,313 per ton. The final overall seasonal grower return for all 2003 crop prunes was calculated as \$772 per ton from information reported in "THE WALNUT-RAISIN-PRUNE REPORT SUMMARY, 2003 CROP YEAR" dated October 8, 2004, published by the California Agricultural Statistics Service. The same report for the 2004 crop year, dated October 7, 2005, shows an average grower return of \$1,496 per ton.

The Marketing Policy for the crop year beginning August 1, 2004 was established as 100% salable, and 0% reserve.

Carryout as Reported 7/31/05 (c)	25,931	27,228 (a)

Footnotes: (a) Effective for 1984 and subsequent crop years, a processing gain factor of 1.05 will be used to convert natural condition weight to processed weight (and conversely). For 1983 and prior crop years, a processing gain factor of 1.03 was used.

(b) We have excluded 178 tons of trash content and 254 tons of undersized prunes from total inbound inspections of 47,753 tons. See tables 3, 5, and 6.

(c) As reported by handlers as of 7/31/05 basis natural condition, variance from the calculated figure may be due to the fact that processing gain varies and reporting methods differ.
