FINAL STATISTICAL REPORT

2001-02

The attached tables reflect the results of marketing the 2001-02 prune crop under the provisions of Marketing Agreement No. 110, as Amended, and Order No. 993, as Amended, regulating the handling of dried prunes produced in California. They are listed as follows:

17	Inter-Handler Transfers

We have calculated that the seasonal average parity price for dried prunes for the 2001-02 crop year was \$2,251 per ton. The final overall seasonal grower return for all 2000 crop prunes was calculated as \$809 per ton from information reported in "WALNUT-RAISIN-PRUNE REPORT SUMMARY, 2000 CROP YEAR" dated October 12, 2001, published by the California Agricultural Statistics Service. The same report for the 2001 crop year, dated October 11, 2002, shows an average grower return of \$723 per ton.

The Marketing Policy for the crop year beginning August 1, 2002 was established as 100% salable, and 0% reserve.

Carryout as Reported 7/31/02 (c)	63,536	66,713 (a)

- Footnotes: (a) Effective for 1984 and subsequent crop years, a processing gain factor of 1.05 will be used to convert natural condition weight to processed weight (and conversely). For 1983 and prior crop years, a processing gain factor of 1.03 was used.
- (b) We have excluded 815 tons of trash content and 5,823 tons of undersized prunes from total inbound inspections of 142,151 tons. See tables 3, 5, and 6.
- (c) As reported by handlers as of 7/31/02 basis natural condition, variance from the calculated figure may be due to the fact that processing gain varies and reporting methods differ.
