The attached tables reflect the results of marketing the 2000-010 prune crop under the provisions of Marketing Agreement No. 110, as Amended, and Order No. 993, as Amended, regulating the handling of dried prunes produced in California. They are listed as follows:

We have calculated that the seasonal average parity price for dried prunes for the 2000-01 crop year was \$2,243 per ton. The final overall seasonal grower return for all 1999 crop prunes was calculated as \$892 per ton from information reported in "WALNUT-RAISIN-PRUNE REPORT SUMMARY, 1999 CROP YEAR" dated October 13, 2000, published by the California Agricultural Statistics Service. The same report for the 2000 crop year, dated October 12, 2001, shows an average grower return of \$809 per ton.

The Marketing Policy for the crop year beginning August 1, 2001 was established as 100% salable, and 0% reserve.

- Footnotes:
- (a) Effective for 1984 and subsequent crop years, a processing gain factor of 1.05 will be used to convert natural condition weight to processed weight (and conversely). For 1983 and prior crop years, a processing gain factor of 1.03 was used.
  - (b) We have excluded 904 tons of trash content and 11,141 tons of undersized prunes from total inbound inspections of 214,802 tons. See tables 3, 5, and 6.
  - (c) As reported by handlers as of 7/31/01 basis natural condition, variance from the calculated figure may be due to the fact that processing gain varies and reporting methods differ.
